Work Experience

Unity Developer AR | VR (Remote) *04/2022 - present*

Arthur Technologies

Feature development and maintenance of Arthur VR Virtual Office App.

Implemented **SSO** for Arthur.

Wrote an algorithm to export pinboards as **PDF** and **CSV** files.

Implemented optimized **APIs** that reduced profile picture, avatars and environment metadata to be downloaded in a single call.

Worked on **Seated Mode** that allowed users to sit on virtual seats in an environment. This feature brought more realism to the already great Arthur Office.

ChatBot for Arthur with audio playback capabilities synced across all clients.

JSON Editor to manage Server Configurations easily.

Working on Unity Game Engine and Photon Server for Real Time communication.

Unity Game Developer (On-site) *07/2021 - 04/2022*

The Knights Pvt Ltd

Collaborated with a team of developers, artists, and designers to create three successful Android games, including a sniper game, a fighting game, and a 5v5 tactical multiplayer shooter.

Utilized Unity Game Engine and C# programming language to develop and improve various aspects of the games, including gameplay mechanics, user interface, and performance optimization.

Implemented backend functionality in PHP and utilized Photon Game Server to support the multiplayer functionality of the 5v5 tactical shooter game.

Fixed bugs and made improvements to ensure smooth gameplay experiences for players.

Worked closely with artists and designers to integrate game assets and create visually stunning environments and characters.

Maintained clear communication with team members to ensure successful project completion.

Participated in playtesting and user feedback sessions to make adjustments and improvements to the games.

Unity Game Developer (On-site) *10/2020 - 06/2021*

PlasmaIT Solutions

Collaborated with a team of developers, artists, and designers to create successful hyper casual and car simulation games for mobile platforms.

Utilized Unity Game Engine and C# programming language to develop various aspects of the games, including gameplay mechanics, user interface, and performance optimization.

Fixed bugs and made improvements to ensure smooth gameplay experiences for players.

Technical support to Developers.

Indie Game Developer *06/2019 - present*

Designed, developed, and published three games for Android platforms: Just Catch Boxes, Relieve, and Subway Traffic Racer, under the name of Boxes Labs.

Worked alone on all aspects of the game development process, including programming in C# on Unity Game Engine,

Created art with Adobe Illustrator, and incorporated licensed sound and music.

Utilized Unity Game Engine and C# programming language to develop all aspects of the games.

Maintained an active social media presence to promote games and engage with fans.

Game Developer Intern (On-site) *10/2019 - 01/2020*

StackBuffers

Worked individually to create a multiplayer chess game using Unity Game Engine and C# programming language.

Contributed to game design discussions and provided suggestions for improving game features and mechanics.

Implemented online multiplayer functionality using Photon game server.

Worked with artists and designers to integrate game assets and create visually stunning environments and characters.

Fixed bugs and made improvements to ensure smooth gameplay experiences for players.

Volunteer *08/2017 - 09/2017*

READ Foundation

Raised funds for the Education of Orphan Children as part of the Volunteer In Service course at Capital University of Science and Technology.

Projects

ChatGPT Wrapper for Unity (Open Source)

Wrote a ChatGPT Wrapper so that Developers can easily integrate chat systems into Unity.

Mesh Editor for Unity (Open Source)

Currently users in unity can change mesh vertices only in edit mode that too with the help of some packages. This project is designed to help users change vertex positions in play mode through Game Window. User's can change vertex positions on the x,y and z axis just like they move gameobject in editor. The idea behind changing mesh vertices in play mode is to make it easier to be integrated into any project that wants to allow users to interact with 3D objects.

Mega Car Stunts - Android Game - 2021

Car Stunt Game developed using Unity.

SDK and Render pipeline used : URP, Admob, and Firebase Analytics.

Subway Traffic Racer 3D - Android Game - 2021 (Personal)

Hyper Casual endless car runner game using Unity URP.

Integrated Admob with mediation, Firebase Analytics, Google play Games Leaderboard and Achievements.

Prado Car Adventure - Android Game

Complete game redesign and optimization.

Advance Police Parking - Android Game

Game optimization and added a new mode.

SDK's used Admob, Unity Ads, Unity Analytics.

FPS Online Multiplayer Shooter

5v5 Tactical Multiplayer Shooter

Developed player abilities mechanics, shop system and ongoing bug fixing and improvements along with the team.

Skills

- **Unity Game Development** (VR. AR. 2D, 3D, C#, Firebase Services, Photon 2, Facebook Services, Admob, IAP, URP)
- Hands-on experience in integrating Ad Networks Admob, Facebook Audience Network, Unity Ads, Yodo1, ConsoliAds.
- Experience in App and Game Optimization.
- Hands-on experience of Adobe illustrator
- Hands-on experience of **OpenAI APIs.**
- Hands-on experience of MYSQL, Firebase, AWS Services and PHP API development.

Education

BS in Software Engineering *09/2015 - 06/2019*

Capital University of Science and Technology - Islamabad
